

DURABLE • BEAUTIFUL • DEPENDABLE

DURA² TREATED TIMBER

HIGH QUALITY FENCING TIMBER

DURA²® is synonymous with quality performance across Europe thanks to a patented enhanced high pressure treatment based on Tanalith-E®

WHY DURA²®

- ✓ **Unique patented treatment process**, with multiple impregnations and multiple controlled dryings
- ✓ **Durable**: long lifespan and ecological
- ✓ More **sustainable forest management** and **reduced CO₂** emissions
- ✓ **User friendly**: no unpleasant odors, does not shed
- ✓ **The choice of wood**: we only use Slow Grown Pine for our posts, which are dried and treated with our Patented DURA² Treatment process to Use Class 4+ (UC4+) in ground contact
- ✓ **Maintenance-friendly**: no sanding, painting or varnishing required
- ✓ Based on the already trusted **Tanalith-E® high-end pressure wood preservative**
- ✓ **BPR Authorization**: approved under Biocidal Products Regulations, passing all necessary environmental, human and animal health risk assessments
- ✓ **Proven top quality** since 2019 when creosote was banned in France
- ✓ **THE alternative** for Creosote treated timber
- ✓ **Beautiful warm chestnut brown** color, specially designed for DURA²
- ✓ **Elegant appearance**

DURA² is synonymous for quality, trust and service, that's why DURA² wood Use Class 4+ has a guarantee of 20 years

* The full version of warranty conditions is available on request or in case of any concerns regarding this guarantee, please contact your distributor

OUR EXPERIENCE

In 2019, Creosote was suddenly forbidden in France.

What seemed like a problem at first became an opportunity with great success. Not only did many French fencing contractors switch to DURA², but also the Netherlands and Belgium followed, despite Creosote not having the same restriction in these countries.

**ONCE YOU'VE TRIED DURA²[®]
YOU WON'T LOOK BACK.**

TESTIMONIAL FROM ONE OF OUR DISTRIBUTORS

Following the ban on creosote, we marketed this premium product to our key customers in Normandy in 2019. Several points immediately appealed to us:

- The product is beautiful, it is not dangerous, no burning of the skin and eyes
- The installation itself, even in the heat, is without risk for the installers
- For customers with fences with creosote in need of repair, DURA² is ideal because the color is identical and the repairs are therefore not visible
- Storage of creosote posed problems and care had to be taken not to contaminate the soil in the storage areas
- In the four years that our customers have installed DURA², we have received very good feedback about the aging process and the color remaining good over time

For all these reasons, we are satisfied that we no longer use creosote, DURA² as an alternative is ideal

TESTIMONIAL FROM ONE OF OUR DISTRIBUTORS

After years of putting up creosoted fences, we switched to DURA².

A perfect alternative with only advantages: Fitters are very happy with it. Material does not stain or burn. The DURA² fence is safe for humans and animals. DURA² meets all our quality requirements. The dark brown color of the fence creates a calm image in the landscape.

For us, DURA² is the sustainability process for the future!
